# FULLY MANAGED APACHE KAFKA®

In our cloud or yours, with 24x7x365, hands-on support

Eventador's Fully Managed Apache Kafka—deployed in your cloud or ours—eliminates the complexity of deploying, managing and maintaining Apache Kafka clusters. With multiple deployment models to fit your needs, Eventador delivers push-button ease-of-use with the Console User Interface. Eventador's expert, hands-on support offers 24x7x365 peace-of-mind that your Apache Kafka deployment will always perform optimally.

Simple, Guided Apache Kafka Deployment Creation

In our AWS account or in yours and VPC peered to your applications, Eventador deploys Apache Kafka clusters (including any needed replication) across global AWS regions. At the push of a button, Eventador automatically spins up the appropriate AWS resources and configures your cluster—all managed via Kubernetes in the background. And our elastic, pay-as-you-go model lets you custom build a implementation that fits your deployment and budget needs.

Highly Observable and Monitored

Eventador's Fully Managed Apache Kafka clusters are easily monitored within the Console Dashboard and with seamless integration via JMX exporter or monitoring providers like Datadog. The deployment is also monited 24x7x365 by virtual NOC.
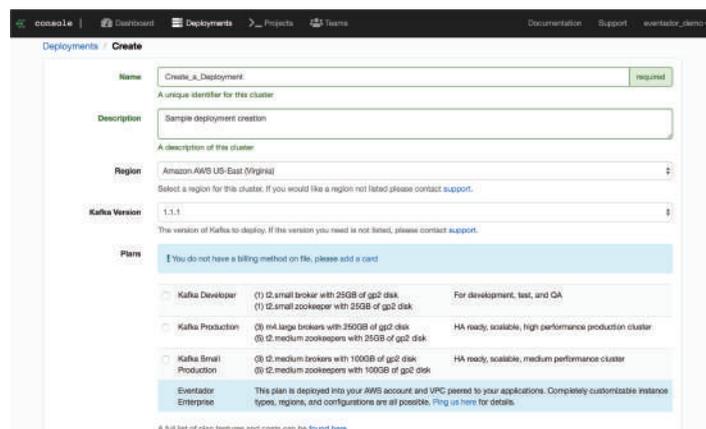

Robust Security Controls

Security is baked into Eventador's Fully Managed Apache Kafka. Users have multiple authentication capabilities including SASL_SSL or SSL certificates. Users can also quickly and easily whitelist consumers and producers via the Eventador deployment scoped ACL controls. And with robust teams features, users can quickly and easily set team access controls.
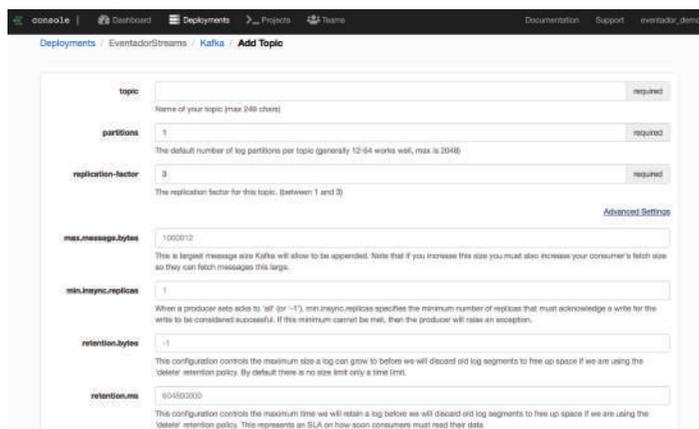

Easy Topic Creation and Management

Creating and managing topics has never been easier than with Eventador's Fully Managed Apache Kafka UI interface for topic CRUD—visualizing the partition map with leaders and replicas, customizing settings with intelligent defaults, consumer group lag and more. Additionally, it's never been easier to add or scale topics on-demand via the Console UI.

Eventador.io made the entire process painless. They have been a true partner, starting with the initial evaluation and continuing through our production implementation. Their expertise with Kafka allows us to stay solely focused on building and shipping features while they manage our Kafka infrastructure. ~ Matt Montigel, Director of Backend Engineering at Bleacher Report/Time Warner

With Fully Managed Apache Kafka—deployed in AWS regions worldwide—Eventador's expert engineering team delivers the support and expertise you need to focus less on optimizing and troubleshooting your clusters and more on developing the line of business applications that require streaming data.

Whether you're just starting to dip your toe into the waters with Apache Kafka or you've built out a robust implementation, Eventador's 24x7x365, expert, hands-on support via Slack, email and phone eases the time and resource burden from you and your teams, so you can deliver on critical real-time application development.
